Outline of requirements for personal project

This document lists things you should consider for your personal project. Not everything is necessary as some items may not be relevant but you should consider each item. As we cover new material in class and labs you should be thinking about applying the new material to your own project, building it up each week.

- WPF/XAML (may move this to .NET MAUI I)
- Classes/Objects ✅
- Inheritance
- Interfaces
- Sorting/Filter/Searching ✅
- Lists/Observable Collections✅
- Event Handling ✅

  (this is handling events such as button click, selecting dropdown menus etc)
- Working with Dates✅
- Github ✅
- Hand coded XAML - not drag and drop ✅
- Database – have a backend db to your application✅

- LINQ – use when interacting with the database ✅
- Additional Windows/Navigation ✅

  (can use Tabs here to have multiple screens)
- JSON
- Images
- Styles ✅
- Data Templates
- Exception Handling/Defensive Coding
- Testing
- Something extra – include something we have not covered in class to demonstrate research skills
